

# Application and Change Control Essentials - Introduction

Self-Paced Online Training

## Highlights

### Duration

1 hour

### Prerequisites

Students taking this course should have a working knowledge of Windows operating systems, system administration, and network technologies. Basic understanding of computer security, command line syntax, malware/anti-malware, virus/anti-virus, and web technologies is recommended. Prior experience or working knowledge of ePolicy Orchestrator is also required.

### How to Register

This course is available for purchase at <https://training-portal.trellix.com/>.

## Introduction

This course provides an in-depth solution overview and guide for planning a successful Application and Change Control (TACC) deployment in your environment. Application and Change Control is made up of three components; Application Control, Change Control, and Integrity Monitor. Application Control uses dynamic allowlisting to make sure that only trusted applications run on devices, servers, and desktops. Change Control allows you to monitor and prevent changes to the file system, registry, and user accounts. Integrity Monitor provides real-time monitoring and identifies transient change violations. This course bundle is designed as a practical starting point for someone who is new to supporting TACC.

## Learning Objectives

After completing this course, learners should be able to:

- Describe the Application and Change Control solution and components.
- Plan an Application and Change Control deployment.

## Who Should Attend

This course is intended for system and network administrators, security personnel, auditors, and/or consultants concerned with system endpoint security.

## Course Outline

1. Course Introduction
2. Application and Change Control Overview
3. Course Summary
4. Course Exam
