

Trellix Data Security Suites

Protect the data lifecycle

Key Benefits

- **Scale advanced protection** across any size environment, manage multiple operating systems, and address unique use cases.
- **Protect what matters** to your organization with discovery and classification across 400+ file types and exact data matching to limit false positives.
- **Block exfiltration** attempts while quickly and effectively managing incidents from end-to-end.
- **Secure sensitive data** for users on the go or at their workstations with encryption at the device and file level.
- **Defend your databases** and the sensitive information they contain while optimizing performance and closing security gaps.
- **Streamline compliance** activities with robust reporting, auditing, and forensics capabilities.
- **Flexible deployment** with SaaS, on-premises, or hybrid delivery options, based on the needs of your enterprise.

With Trellix Data Security Suites, you're able to address your most pressing data security challenges:

Insider Risk: Nearly three-quarters of all breaches result from an accidental or intentional human threat. Insider risks can result from careless information handling, misconfigurations, or malicious intent – making it difficult to pinpoint – especially without hindering user productivity.

Ensuring Compliance: Organizations, especially in highly regulated industries, face a myriad of ever-changing laws and regulations while governance, risk, and compliance tasks are often highly manual, time-consuming, and critical to prevent penalties for non-compliance.

Expanding Information Footprint: Organizations lack visibility into the expanding amounts of sensitive and proprietary information stored across endpoints, networks, databases, via email and web, and into the cloud; while protecting information at the file level becomes more critical.

Trellix Data Security Suites: Featured Offerings

Data Loss Prevention Suite

The Data Loss Prevention (DLP) Suite protects sensitive and proprietary data across endpoints, email, web browsers, networks, and into the cloud. The suite adds vast data discovery capabilities, stops data exfiltration across common threat vectors, and educates users on data-sharing policies. It aligns with regulatory standards for easy compliance. An add-on for Network and Endpoint DLP, Optical Character Recognition (OCR) Suite, extends protection across images, PDFs, and scanned document files. As well, get comprehensive cloud data security through one of our integrated products or our seamless collaborative partnerships.

Data Security Endpoint Protection Suite

With the Data Security Endpoint Protection Suite, safeguard data on workstations, laptops, removable media, and file storage, while expediting and simplifying compliance activities like reporting to avoid penalties and fines. Enable users to work safely from any location, share files within teams or departments, meet expectations for separation of duties, and support multiple OS environments. Easily apply DLP policies to encrypt data at the file level and get self-extracting email encryption protection for attachments. Extend visibility and security across non-text files with the OCR for Endpoint add-on.

Database Security

Database Security offers comprehensive activity monitoring to detect and address data events, vulnerability management to find and guide remediation of security gaps, and virtual patching to keep your databases updated with little to no downtime, even when patches are unavailable. Available as a single offering or as an add-on to the Data Security Suite, Database Security helps you meet global compliance mandates and automate manual tasks for leading database types.

Data Security Suite

The Data Security Suite offers comprehensive discovery, visibility, and control across the top threat vectors throughout the data lifecycle. Protect sensitive and proprietary information across endpoints, email, web, and network storage, as well as safeguard device and file data. Get centralized management, robust compliance reporting, and user coaching. Receive the OCR Suite (for Network and Endpoint DLP) at no extra cost to extend protection across images, PDFs, and scanned document files. In addition, our integrated products and seamless collaborative partnerships deliver comprehensive cloud security.

Package	What it includes	Insider Risk/ Threat	Governance Risk and Compliance	Expanding Information Footprint
Trellix Data Loss Prevention Suite	All Data Loss Prevention products	✓	✓	✓
Trellix Data Encryption Suite	All Data Encryption products	✓	✓	
Trellix Data Security Endpoint Protection Suite	Data Loss Prevention Endpoint Complete and all Data Encryption products	✓	✓	
Trellix Data Security Network Suite	Trellix DLP Network Prevent, Trellix DLP Network Monitor, and Trellix DLP Discover	✓	✓	✓
Trellix Database Security	One comprehensive offering to find, secure, and optimize databases and their sensitive information.	✓	✓	✓
Trellix Data Security Suite	All DLP and Encryption products	✓	✓	✓
Trellix Database Security Add-on for Data Security Suite	Add Database Security to our Data Security Suite	✓	✓	✓
